2023 Toyota Camry

SE · Gray · 17,800 mi

\$27,600

#132

Get a quote →

Here's what's available — both are four-door and under \$35K:

The **2023 Camry SE** at \$27,600 (17,800 mi) is a four-door sedan, and the **2023 RAV4 XLE** at \$32,995 (12,400 mi, Certified Pre-Owned) is a four-door SUV. Both fit your criteria, so it mostly comes down to whether you want a sedan or a small SUV.

Want me to build out a quote on either one so you can see what the monthly payment would look like?

I like the Rav4

Good pick — the RAV4 XLE is a solid choice, and being Certified Pre-Owned means it comes with extra warranty coverage. Let me set up a quote so you can see the numbers.

To build it out accurately, a couple of quick questions:

Q: How are you thinking of paying?

A: Lease

Q: Roughly how much are you putting down?
A: \$5,000

Synthesized lease parameters to construct vehicle quote >

Let me build out a lease quote for the RAV4 with \$5,000 down.

There's your lease quote — about **\$573/month for 36 months** with the \$5,000 down.

A couple things worth flagging on leasing a CPO vehicle: leases are usually structured around mileage caps (often 10-12k miles/year), so it's worth confirming the annual mileage allowance and what the overage charge per mile is. Also worth asking what the disposition fee is at lease-end.

For comparison, if you wanted to see how a finance quote stacks up — where you'd actually own it at the end — I can build that out too. Leasing tends to have a lower barrier but you don't build any equity. Want me to run a finance scenario side by side?

Ill need it for 48 months

Stretching it to 48 months brings the payment down to about **\$488/month** with the same \$5,000 down.

One thing worth thinking through on a 48-month lease specifically: this is a 2023 vehicle, so by lease-end it'll be around 6 years old. Make sure the lease term stays within the CPO warranty coverage, or you could be on the hook for repairs in the final stretch while still making lease payments. Worth asking the finance office where the bumper-to-bumper and powertrain coverage lands at month 48.

Want me to go ahead and start a deal on this, or would you like to see the finance numbers at 48 months for comparison first?

yes

DEAL #36

Maria Lopez

2023 Toyota RAV4
XLE Silver
\$32,995 \$658/mo · 72mo @ 6.9%

CREDIT SUBMITTED

Type	Finance
Down	\$3,000
Trade-in	2016 Honda Civic · ACV \$9,500 – payoff \$4,200 = \$5,300
Products	none
Apply for financing →	

There's already a deal open (#36) for the RAV4, but it's showing \$658.45/mo — that doesn't match the 48-month lease we just landed on. Let me attach the correct lease quote to the deal so it reflects the \$488/month figure.

Good news — attaching it to your existing deal actually brought the payment down further, to about **\$353/month** for the 48-month lease. That's because the deal already has trade equity attached (around \$5,300), which reduced the financed amount from \$31,416 down to \$26,116. So your \$5,000 cash down plus that trade credit is doing the work.

The deal is now updated to reflect the 48-month lease at \$353/month. The next step to actually move forward is submitting a credit application so the finance office can send it to lenders for approval.

Before you do that, two honest things worth keeping in mind:

The trade equity is baked into this number, so it's worth confirming the dealership's trade-in valuation matches what your vehicle is actually worth — it's easy to lose money there if the trade allowance is low. And the 48-month-on-a-2023-vehicle warranty point still stands; make sure CPO coverage runs through the full term.

Want me to go ahead and start the credit application, or would you rather nail down the trade and warranty details first?

I do want the warranty, and my trade is around 5300 value

Validated trade equity and clarified warranty intentions thoughtfully >

That's reassuring on the trade — your \$5,300 estimate lines up with the equity already reflected in the deal, so it doesn't look like you're getting shortchanged there. Good.

On the warranty, one distinction worth being clear about, because the finance office may blur it:

The RAV4 is Certified Pre-Owned, which already includes Toyota's CPO warranty at no extra cost — typically a 12-month/12,000-mile comprehensive layer plus powertrain coverage out to 7 years from the original sale date. So part of what you want may already be included. What's worth doing is asking exactly when that factory CPO coverage expires relative to your 48-month term, since that's the gap I flagged.

If there's still an uncovered stretch at the end, *then* an extended service contract (a purchased warranty product) might make sense to fill it. But those are optional, negotiable, high-margin add-ons — don't let them be presented as required, and the first-quoted price is rarely the real price. It's reasonable to ask for the contract price in writing and compare it against what an independent provider charges.

So my honest read: confirm the CPO end date first, then decide whether you actually need to buy anything extra. Want me to go ahead and start the credit application on the lease as it stands, and you can sort the warranty specifics with the finance office separately?

I like that, let's start the credit app

Identified missing information needed to proceed with application >

To submit the credit application, the finance office needs your annual income. What should I put down?

One note: I'll only ask for income here. The application may also reference the last four of your SSN — only share that if you're comfortable, and never your full SSN in this chat.

APPLICATION #24

Maria Lopez

2023 Toyota RAV4 \$353/mo

✓ Submitted

2 Sent to lenders

3 Decision

Check for updates →

Your credit application (#24) is submitted for the deal. It now goes to the finance office to send out to lenders for a decision.

I can check the status whenever you want to see if lenders have come back with an approval and what terms they're offering. Lender decisions sometimes come back with a different APR than the 5.5% we quoted, so it's worth reviewing the actual offer before signing anything — the rate directly affects that monthly payment.

Want me to check the loan status now, or give it a bit and check back?
